Customer GREFIS Hotel

System Ultrafiltration system spaliQ:UF 200

Description

Water treatment for the swimmers' pool of a hotel. An ultrafiltration system spaliQ:UF 200 ensures excellent water quality. Thanks to the compact modular design and the low demand for flushing water, the system can be installed in a very space-saving manner. As the room for the technical equipment is located in the basement and the pool is on the top floor, an additional pressure booster is required.

Scope of supply

- Ultrafiltration system spaliQ:UF 200
- Pressure booster station
- Measuring, control and dosing technology
