

Swimming with a view

Koblenz

Customer Faehrhaus am Stausee (hotel)

System Ultrafiltration systems type spaliQ:UF – Treatment for a hotel swimming pool

Description

This new building was constructed directly on the Moselle. The Panorama Pool is one of its highlights. While using it, the bather has a lovely view of the countryside. The pool is divided into a non-swimmer and a shallow area. The wide shower jet, massage jet, floor jet and counter-current system provide the bather with various wellness options.

High-quality materials were not only used for the visual effect, but state-of-the-art technology was also installed behind the scenes. Two ultrafiltration systems and a GENO-minator thus ensure an excellent water quality, for instance.

Customer Faehrhaus am Stausee (hotel)

System Ultrafiltration systems type spaliQ:UF – Treatment for a hotel swimming pool

Scope of supply
